

# **Verity Edge — NIS2 Audit Evidence Export (v1.5, Redacted)**

This export demonstrates how Verity Edge can produce audit-grade, outage-resilient evidence for NIS2-regulated organisations across multiple edge sites. All content in this sample is synthetic and redacted.

Included artifacts: continuity logs, Timescale-style metrics, hash-chained audit logs, inventory snapshot, SBOM stub, and attestations for EU residency, zero-PII telemetry, and build provenance.
